

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A receipt management article of manufacture comprising:
a computer storage medium configured to store receipt data from multiple disparate vendors;
communications logic for establishing a communicative link between the system and receipt data processing logic disposed within individual ones of said multiple disparate vendors;
and,
a receipt management processor programmed to moderate access to said storage medium,
wherein said storage medium further comprises a configuration for indexing said store receipt data according to at least one of a vendor identifier and a transaction identifier;
security and authentication logic programmed to secure access to said receipt data through at least one of encryption, password protection and certificate validation and authentication.

Claims 2-8 (Cancelled)

9. (Currently Amended) A method for electronic receipt management comprising the steps of:
establishing a communicative link between a data store of electronic receipts from multiple disparate vendors, and an individual one of said multiple disparate vendors;
authenticating said individual one of said multiple disparate vendors;

locating a specific electronic receipt stored within said data store which corresponds to an identifier provided by said individual one of said multiple disparate vendors; and,

transmitting said located specific electronic receipt to said individual one of said multiple disparate vendors over said established communicative link, wherein said establishing step comprises the step of inserting a portable storage medium containing said data store into a reader coupled to said individual one of said multiple disparate vendors.

Claims 10-12 (Cancelled)

13. (Currently Amended) A computer-readable medium ~~machine-readable storage~~ having stored thereon a computer-readable instructions ~~program~~ for electronic receipt management, the computer -readable instructions ~~program comprising a routine set of instructions~~ for causing a computer system ~~the machine~~ to perform the steps of:

establishing a communicative link between a data store of electronic receipts from multiple disparate vendors, and an individual one of said multiple disparate vendors;

authenticating said individual one of said multiple disparate vendors;

locating a specific electronic receipt stored within said data store which corresponds to an identifier provided by said individual one of said multiple disparate vendors; and,

transmitting said located specific electronic receipt to said individual one of said multiple disparate vendors over said established communicative link, wherein said establishing step comprises the step of inserting a portable storage medium containing said data store into a reader coupled to said individual one of said multiple disparate vendors.

Application No.: 10/663,509

Claims 14-16 (Cancelled)
